The best dayes to take purgation, are marked thus, p.  
The best dayes to let blood, thus, b.  
Also you shal finde in what degree of any Signe, the  
Moone is in, every day at noone.

First day of every moneth, with the length and shortnesse of  
every first day and night.

**The most convenient tymes for  
certaine thinges, concerning the  
twelue Signes,**

**G**ood to sow, set, or plant, when the Moone is in Taurus,  
Virgo, Capricorne, and Pisces, marked thus,   
Good also to sow al kynd of Corne, when the Moone is in  
Cancer.

Good to graffe, when the Moone is in Taurus, and Aquarius,  
at the encrease of the Moone, marked thus, 

Good to stop Fluxes, Rhetumes, and Laskes, the Moone being  
in Taurus, Virgo, and Capricorne.

Good to enter into Bath, the Moone being in Cancer, Sco-  
pius, and Pisces.

Good to cut the hayre of the head (for the auoydng of baldnes,  
and such incommenience) and to shau the beard, the Moone  
in Libra, Sagittarie, Aquarius, and Pisces, specially from  
the first quarter, to the ful of the Moone.

Good to sheare sheepe, at the encrease of the Moone.

Good to fel Tymber for busldyng, from the ful of the Moone,

But to cut downe, and to fell wood to burne, and that the stocke  
may the better and sooner grow agayne, let the Moone be in  
the first quarter.

gittarie, or Capricorne, from the first quarter, vnto the last.

**Certaine obseruations concer-  
nyng Phisicke,**

**W**hen the weather is extreme hot, or exceeding colde, it is

urgical instrument, or Cauterie, actual, or potential, when the Sunne, or Moone, or Lorde of the Ascendent is in the same Signe that ruleth that part of mans body.

Also Gemini, Leo, the last halfe of Libra, and the first. xii. degrees of Scorpius, with Taurus, Virgo, and Capricorne, are not good for lettynge of blood.

Howeouer, Clusters, and gentle Purgations may be ministered at all tymes without daunger.

And as concerning lettynge of blood, I say, if it be for the Pestilence, the Phrensie, the Pleuresie, the Squinancie, for a continual burning ague, a continual or great headach, proceeding of choler, or hot & superfluous blood: or for any extreme payne caused by heate, choler, or superfluitie of blood. A man (in all these cases) may not tary for a chosen day by the Almanacke, because the patient myght dye in the meane space, but incontinently with all speede, he must be let blood, vntlesse he be very weake, and like to sowe, except also the Moone be in the same Signe, that ruleth that part of mans body.

Yet notwithstanding all these Rules aforesayd, I woulde not wish that any man shoulde trust too much to the vnlearned Chirurgion for lettynge of blood, vntlesse he haue first the consent and counsel of some good and learned Physitian: for in such a case there be many thyngs to be weighed and considered.

As touchynge the Eclipse of the Sunne, that shalbe this yere 1579. you may see it declared in my Prognostication.
